

Ninja Hosting announces the immediate availability to its customers of Joomla 1.5.7 [Wovusani]. **This is a security release** and contains a number of bug fixes, improvements as well as security fixes. **It is strongly recommended that users immediately upgrade.**

Users can upgrade their Joomla installations using the Installatron script handler via their cPanel interface, under the &quot;software&quot; section. It is a simple, two-click process and will take less than a minute.
